

There is an early release of the v2 of this guide that you can find [here](#)
The v2 has been updated and now includes routines for Intermediate and
Advanced!

I will leave this guide up, which you can still access below so that people who
are contempt with sticking to it can do so. I would strongly recommend
moving to the v2 now though.

Aimer7 Routine Addendum

By Tammias

You can skip this first page if you either don't care or you haven't looked at Aimer7's guide before

- What is this? -

It is widely accepted at this point that the guide made by Aimer7 is outdated, given that it was made at the start of 2019 this isn't surprising. Because of this I have taken up the task of creating an updated version of Aimer7's workout routines. I made this guide with the intention of keeping it similar to Aimer7's guide so that it would be familiar to anyone who was following his guide.

- Why doesn't Aimer7 update the guide then? -

Aimer7 is a professional coach who earns money from teaching people how to improve their aim - producing an extensive guide takes a lot of time and effort that could be put into earning an income. These are obviously conflicting interests and as such he hasn't bothered to update his guide, which is entirely within his right.

- If it *was* a good guide how is it bad now? -

When Aimer7 made his guide there was not much more than 400 scenarios, as of the end of May 2020 there are over 3700 scenarios. A lot of the scenarios included in Aimer7's guide were simply the best scenarios available at the time even though they were functionally flawed. These flaws can range from scenarios with a heavy element of RNG such as [Air](#) to scenarios with scoring systems that encourage bad technique such as [Popcorn](#). [Air](#) has an issue known as "sky botting" which is where a flying target can get 'stuck' above the player jeopardizing a run. [Popcorn](#) uses the accuracy as a multiplier for score; on a scenario with a median accuracy as low as [Popcorn](#) has, this encourages the player to stop shooting so they don't ruin the score of a run.

- Why should I trust your judgement? -

Admittedly I'm not nearly as impressive at aiming as some of the top aimers on the KovaaKs/Sparky discord servers. However, I have been aim-training for the past year and in that time, I have improved significantly, and I have learnt a lot about the improvement process. I do not expect, nor do I want you to take my opinion as gospel over other members of the Aim community. I am just a guy with a passion for helping others and creating tools/resources for the community.

- What are some key differences between your guide and Aimer7's? -

For one, this guide lacks a lot of the strong theory that went into the introduction of Aimer7's guide. I am not going to copy what he wrote verbatim, instead I would recommend you go and read the first few pages of [his guide](#). It covers a lot of important information regarding the usefulness of aim training as well as motivational advice.

In terms of formatting, I have significantly streamlined the process of determining where you should start, which you will see soon.

Aimer7 highlights scenarios based on category like this:

[Close Long Strafes Invincible](#), [1wall6targets TE](#), [Bounce 180 Tracking](#).

I instead will just colour text like this: [Close Long Strafes Invincible](#), [1wall6targets TE](#), [Bounce 180 Tracking](#).

Where [Red](#) is [Click Timing](#), [Purple](#) is [Target Switching](#) and [Blue](#) is [Tracking](#).

Aimer7 suggests alternative scenarios that you can do like this: [1wall6targets TE](#) (1wall9000targets)

I use the C programming notation for OR which is two vertical lines ||

For example: [1wall6targets TE](#) || [1wall9000targets](#)

This guide's routines are also organized into tables, with scenarios on the left and durations on the right.

There are other things I will point out or restate as they become relevant further down.

Score Targets are subject to change but should remain mostly the same

- Where should I start? -

To determine what skill level you should start at I would recommend doing 5 to 10 attempts of the following scenarios; **1wall6targets TE**, **Bounce 180 Tracking**, and **Close Long Strafes Invincible**.

Complete Beginner;

<120 1wall6targets TE, **<45 Bounce 180 Tracking**, **<11500 Close Long Strafes Invincible**

Intermediate Beginner;

120 to 130 1wall6targets TE, **45 to 50 Bounce 180 Tracking**, **11500 to 12800 Close Long Strafes Invincible**

Advanced Beginner;

130 to 140 1wall6targets TE, **50 to 56 Bounce 180 Tracking**, **12800 to 14000 Close Long Strafes Invincible**

Sub-Intermediate;

140 to 150 1wall6targets TE, **56 to 63 Bounce 180 Tracking**, **14000 to 14800 Close Long Strafes Invincible**

Intermediate;

150 to 165 1wall6targets TE, **63 to 73 Bounce 180 Tracking**, **14800 to 16100 Close Long Strafes Invincible**

Advanced;

165 to 180 1wall6targets TE, **73 to 85 Bounce 180 Tracking**, **16100 to 16800 Close Long Strafes Invincible**

Sub-Aimbeast

180+ 1wall6targets TE, **85+ Bounce 180 Tracking**, **16800+ Close Long Strafes Invincible**

You should meet at least one target score for a given level to warrant starting at that point. If you almost beat one of the score targets then feel free to keep trying or to come back after a few days and try again. If for example your best scores were **135 in 1wall6targets TE**, **48 in Bounce 180 Tracking**, and **12400 Close Long Strafes Invincible**, then you should start at Advanced Beginner. You might also want to consider doing the routine that correlates to which score you beat, **Click Timing** for **1wall6targets TE** for example. If you do noticeably better at one of these scenarios than the other two, I would recommend starting on the complete routine a level or two below the scenario you were best at so you can develop your skills in the scenarios you weren't as good at.

- Should I do Tracking, Click-Timing or Complete routines? -

Which type of routine you do depends entirely on what you want to focus on. Whether that is a particular game you want to improve at, a type of weapon you want to improve at, or just whatever you feel you aren't good at.

As a general guide;

Tracking	=	sustained rate of fire	=	Soldier76(OW)/Spitfire(Apex)/Lightning gun(Quake)
Complete	=	short duration tracking	=	Any AR in COD/R6/PUBG...
Click-Timing	=	Semi-auto / Very low TTK	=	Shotguns/Snipers...

Tracking	can apply to	Class shooters (OW/Paladins) or Battle royals (not PUBG)
Complete	can apply to	Same as tracking but including PUBG and most TDMs (COD)
Click-Timing	can apply to	Any sniper/shotgun and most of CS/Valorant

For most games, unless there is a very heavy focus on either low or high TTK (time to kill) it is hard to pin a specific routine type to that game. Just go with something similar to your playstyle. Also 'Complete' doesn't have to mean exclusively short duration tracking, a 'complete' routine is also a *balanced* routine, a jack of all trades.

There is extra information you might find useful on page 12, including progress tracking advice and advice for scenarios. Instead of downloading this guide I would recommend making a shortcut and giving it the link to this document so that you can always have an up to date version.

Complete Beginner Routines;

Welcome to the beginner routines! Remember to do the benchmarks at the start of the previous page to determine what level you should start at. The scenarios marked with an asterisk * at the bottom are optional 'challenges' for you to try out, or if you want to make your routine longer.

Don't worry about how well you perform at this stage, just focus on getting a feel for the scenarios and your mouse. At this stage it doesn't matter much but you should be doing challenge mode instead of free play. Scores are *usually* a good indication of performance; a challenge run is normally 1 minute so you would do 10 challenge to make up the 10 minutes of a routine.

Do this stage for 10 to 20 days. Feel free to try the benchmark again if you think you are good enough to move on earlier. You don't have to do 5-10 runs of all of the benchmark scenarios, just try to beat one of the score targets.

Beating the benchmarks is not a requirement to move on.

Tracking routine	Time
Midrange Long Strafes Invincible	10 mins
air far long strafes	10 mins
Vertical Long Strafes	10 mins
Bounce 180 Tracking Large	10 mins
1wall6targets TE	10 mins
Tile Frenzy – Strafing – 01 (you can keep doing patTargetShotgun if you liked it)	10 mins
*Air Invincible	10 mins

Click-Timing routine	Time
1wall6targets TE	10 mins
Tile Frenzy – Strafing – 02 (you can keep doing patTargetShotgun if you liked it)	10 mins
5 Sphere Hipfire small	10 mins
Tile Frenzy Flick	10 mins
Midrange Long Strafes Invincible	10 mins
Vertical Long Strafes	10 mins
*Tile Frenzy 180 Strafing	10 mins

Complete routine	Time
Midrange Long Strafes Invincible	10 mins
1wall6targets TE	10 mins
air far long strafes	10 mins
Tile Frenzy – Strafing – 01 (you can keep doing patTargetShotgun if you liked it)	10 mins
Vertical Long Strafes	10 mins
Target Switching 90	10 mins
*Tile Frenzy 180 Strafing 200 Percent Tracking	10 mins

You don't have to do these routines in the order given, the given order is just a suggestion.

Also note that each routine is designed to take an hour to complete, feel free to do the alternatives and/or extras or just do the scenarios for longer if you want to practice for more time.

Intermediate Beginner Routines;

For Click-Timing and Complete you are going to do your first 'Pasu' variant. Something very important to know about 'Pasu' is that unlike the vast majority of scenarios, it uses the "time-scale" function that exists in KovaakS. What time scale does is slow down time to make the scenario easier, this has the unfortunate side effect of also slowing down the challenge timer. What this means is even though the challenge timer says the challenge run lasts 1 minute, it actually lasts longer. The only major scenarios that use Time scale are '1wall5targets_pasu' variants and 'Bounce 180' variants. Fortunately for you, as of the making of this guide alongside the recent changes to UI, the session timer was changed to *not* be affected by time-scale so you can use that to tell how long you have practiced for. Pasu has a time scale of 0.7 which means 7 challenge runs will take 10 minutes. Bounce 180 has a time scale of 0.85 which means 8.5 challenge runs takes 10 minutes (do 8 or 9 for bounce 180).

As a side note, I generally wouldn't recommend doing your entire routine in one sitting, fatigue will impact your ability to improve and learn. Taking a break mid routine is good, you might even want to split up your routine into small chunks you do throughout the day (there is some good advice about fatigue on page 13).

If you are struggling with either **Click-Timing** or **Tracking**, I would recommend adding that categories *extra scenario to your routine to help you improve at it faster. Feel free to have a crack at the benchmarks whenever if you want. Otherwise stick with this level for 2 to 3 weeks.

Beating the benchmarks is not a requirement to move on.

Tracking routine	Time
Close Long Strafes Invincible	10 mins
Smoothness Trainer	10 mins
Vertical Long Strafes	10 mins
Tile Frenzy 180 Strafing 200 Percent Tracking	10 mins
1wall9000targets	10 mins
Tile Frenzy 180	10 mins
*gp 2 invincible	10 mins
*1wall5targets_pasu slow	10 mins

Click-Timing routine	Time
1w2ts reload (you can keep doing 1wall6targets small if you liked it)	10 mins
Tile Frenzy 180	10 mins
1wall5targets_pasu slow	10 mins

fuglaaXYLongstrafes	10 mins
Vertical Long Strafes	10 mins
*Bounce 180 Reload	10 mins
*Close Long Strafes	10 mins

Complete routine	Time
Close Long Strafes Invincible	10 mins
1w2ts reload (you can keep doing 1wall6targets small if you liked it)	10 mins
gp far long strafes	10 mins
1wall9000targets	10 mins
patTargetSwitch easy	10 mins
1wall5targets_pasu slow	10 mins
*Air Invincible	10 mins
*Tile Frenzy 180 Strafing	10 mins

You don't have to do these routines in the order given, the given order is just a suggestion.

Also note that each routine is designed to take an hour to complete, feel free to do the alternatives and/or extras or just do the scenarios for longer if you want to practice for more time.

Advanced Beginner Routines;

Time to pick things up a bit, I would recommend reading the fast strafes explanation at the bottom of page 7 on [Aimer7's Guide](#) first. TL;DR *fast targets are fast and you don't know what's going on because you haven't learned to read the movements of anything that is fast*. Developing the ability to track the motions of a fast target is one of the most ever-present aspects of aim training and in a lot of ways is a key difference between a great aimer and an average aimer.

A general piece of advice I can give is to take it slow, by flicking around rapidly trying to get back on target you are going to make the bots movements look far more erratic and impossible to track. Even if it costs you score at first it is best to intentionally under aim so that you can get a feel for how far you need to move to get back to the target. With practice you can speed up and get into the groove of snapping back to the target concisely (extra advice on fast tracking on page 12).

Other than that I am going to start giving you more options. You will notice the || alternative scenarios, feel free to do these instead of the first scenario in their row. And I mean that, it really does not matter which one you do. Just do whichever feels more enjoyable or is better suited to what you want to improve at.

After 3 to 5 weeks you can move on to Sub-Intermediate. Or give the benchmarks another shot whenever you think you are ready for the next level.

Tracking routine	alternatives	Time
RexStrafesCata Invincible	Air Invincible 6	13 mins
Close Long Strafes Invincible	gp 1 Invincible	10 mins
LG Pin Practice 360	Bounce 180 Tracking	10 mins

5 Sphere Hipfire small	1wall20targets small	10 mins
*Vertical Long Strafes		10 mins
*1wall5targets_pasu Reload		10 mins
*patTargetSwitch No Reload		10 mins

You don't have to do these routines in the order given, the given order is just a suggestion.

Also note that each routine is designed to take an hour to complete, feel free to do the alternatives and/or extras or just do the scenarios for longer if you want to practice for more time.

Sub-Intermediate Routines;

At this point you should feel a bit more confident in your ability to track a fast target, but you still have a lot of progress to make. Remember that you are completely free to do the || alternative scenarios, don't just do the first scenario in each row just because it's the first scenario in each row.

I am also going to start giving you 'Plaza' style scenarios. Unlike your average scenario which lasts for a specific amount of time and rewards you based on performance; a 'Plaza' style scenario ends when you have killed all of the targets. Your score is how much time you have left when you kill the last target. These scenarios can be confusing since it will say you have a very large amount of time to complete the scenario which often scares newbies off who don't want to do a scenario for 16 minutes in the case of [Ground Plaza Easy](#). Don't worry though, as the scenario will end after you have killed the 9th target. Since these scenarios don't last for a specific amount of time, I will ask you to do a number of "runs", which is just playing the scenario until you kill the last target. At this level that should take 4 or so minutes.

You should be ready to move on after 5 to 8 weeks. Or try the benchmarks again whenever you want. Like before, don't force yourself to move on if the intermediate routines feel too difficult. You will make far more progress when your routine is just fairly challenging.

Tracking routine	alternatives	Time

You don't have to do these routines in the order given, the given order is just a suggestion.

Also note that each routine is designed to take an hour to complete, feel free to do the alternatives and/or extras or just do the scenarios for longer if you want to practice for more time.

Intermediate Routines;

A lot is going to change at this point, to begin with you are going to have a lot more || alternative scenarios to choose from. Remember that you should definitely try each scenario and pick the ones that work the best for you. You might not even want to do any from a specific row or do multiple from one row. You can also do different scenarios each day, or alternate scenarios weekly. There are a lot of ways you can structure your routine, find what works best for you.

At this point I am also going to add Dodge scenarios - which can be identified by the underline - to the extra scenarios section. A large portion of aim training scenarios are done as a stationary character, and unless you like dying you probably aren't going to be stopping and standing still to channel your kovaaks skills mid fight in an actual game. So you want to learn to aim and move at the same time, that's what a dodge scenario is for. They are scenarios that score the player based on both moving and shooting. This is very useful as the skills you develop doing so are more transferable to actual games.

Dodge scenarios will contain one or both of these scoring mechanics; "Movement Score" and "Distance Travelled". "Distance Travelled" is based entirely on how far you travelled during the challenge run, the more you move the more score you get. "Movement Score" on the other hand is a bit more involved, in a scenario that uses movement score you will have a bar that fills up while you are strafing, you gain score constantly but only while that bar is being filled. When you change directions it empties, when it fills it turns yellow and you stop gaining score until you change direction. So keep moving and changing directions before it fills up. I'm not going to put any dodge scenarios in the main routine section yet but I would strongly recommend you try some of them. Either as extra or you can replace some of your main routine with them if you want, or do them on alternating days etc.

Since you are going to be doing this level for a lot longer than the previous levels, I'm going to give you score targets to meet. You Don't need to meet all of the score targets, but you should try for a good handful. At least 5 would be good with 1 minimum from each category. The categories being **Tracking**, **Target-Switching**, and **Click-Timing**. This level should take you 2-4 months, it took me 70 days to be confident enough to move on to advanced.

Advanced Routines;

This is where things really get serious. I am going to be honest with you, most people will have given up by this point due to the commitment required. But here you are, if you can get past this level you should be proud.

I am going to start by restating what I said at the beginning of Intermediate, "you should definitely try each scenario and pick the ones that work the best for you." This applies even more now than it did before. At this point I'm not going to give you times and I'm not going to refer to any of the scenarios as "alternatives". If you don't want to do any of the scenarios from a row then don't, if you want to do multiple from one row then go for it. Personally for advanced I did 16 scenarios total, 4 each day for 20 minutes each, doing different scenarios each day until I had done all 16 after 4 days and rinse repeated. That is just what I did as an example, you can make up your own system that works for you.

I am going to add Dodge scenarios to the main scenario list, I would heavily recommend incorporating some of these into your routine if you want your improvements to be transferable. The extra scenarios don't have score targets since (except for the dodge scenarios) they aren't as important to the core skill development that category is focusing on (I also don't want to make score targets for THAT many scenarios :). You should still consider adding them to your routine if you think they apply to what you are trying to improve on.

As with Intermediate you do not need to meet all the score targets, but you should get a good amount of them. Personally I didn't move on until meeting 10 of the 16 score targets that I had set for myself. You should aim to beat around half a dozen to a full dozen score targets depending on how many scenarios you want to include in your routine. You should probably do 8 or more different scenarios total (the more the merrier as they say). This stage will likely take you 3 to 6 months, it took me 103 days, can you do better?

Score Targets are subject to change but should remain mostly the same

Sub-Aimbeast;

At this point I am in no real position to tell you what to do. Below is a list of all the scenarios from the Advanced routines as well as a link to a long list of recommended scenarios compiled by Sini/Sparky. You should be able to make your own routine at this point; these two lists are just a starting point for scenarios you can use. Remember to include a good handful of Dodge scenarios if you want your skills to be as transferable to real games as possible.

A True Sub-Aimbeast should have a solid collection of 99.5 to 99.7 or higher percentile scores.

If you want to go even further a full blown Aimbeast should aim for 99.9 percentile scores or higher.

It is worth noting that the correlation between performance and percentile is not the same for every scenario. Scenarios with fewer entries and scenarios with a reputation for being difficult will be harder to get a 'good' percentile in.

If you don't know the equation for percentiles it is: $percentile (\%ile) = 100 - \frac{(Rank-1)*100}{Entries-1}$

'Top percentage' i.e. top 1% or top 0.1% is: $top\ percentage (\%age) = \frac{(Rank-1)*100}{Entries-1}$

As fractions instead of percentages: $1 - \frac{Rank-1}{Entries-1}$ & $\frac{Rank-1}{Entries-1}$

Sparky:

The sparky community is a very large part of the aim training community, here is a link to the scenario list I mentioned earlier. [Sparky recommended scenarios](#).

I would recommend joining the sparky [discord](#) as well as investigating the [sparky benchmarks](#) and [ranking system](#) if you have not yet, especially if you want the motivation to keep improving past this point.

Tracking your progress:

Keeping track of how well you are doing can be a great way to motivate yourself to keep improving. You can track your own progress manually in a word/excel document if you want, doing so is very common. Here are some templates you can use, or you can figure out your own system.

This [word document](#) is just an example to reference.

This [Spreadsheet](#) can be downloaded for you to use by clicking the *** on the far right of the Dropbox preview.

If you don't have Excel [Here](#) is a version that works on google sheets (the first version doesn't work on excel properly). You can download the file and upload it to google sheets.

You can also use [fat dash](#) to make cool graphs. [Here](#) is a guide on how to use fat dash.

Tracking fast targets:

Tracking a fast target is a very hard and timely skill to develop, I gave some advice at the start of advanced beginner about slowing down so that the bot's movements don't look as erratic but there is a lot more to improving at fast tracking than just pacing yourself. A very important thing to understand is that in any situation where a target changes direction frequently you WILL feel compelled to just start guessing/predicting when it will change direction. This does not make for good practice, guessing does not improve your reaction time; it distracts you from being consistent and undermines your ability to improve. I would strongly recommend watching this video by user christmascancelled <https://youtu.be/KGRfy25ngSM> That video will teach you more about tracking a fast target than anything I can say to you here.

Motivational fatigue:

It is important that aim training doesn't feel like a chore otherwise you won't improve much during the time you spend aim training. It is very easy to become jaded and complacent due to the effort and repetitiveness of aim training; this is a common cause of plateaus in improvement. There are a few pieces of advice I can give you;

- 1) Re assess what aim training means to you and what your goals are. You very well might just not have the drive or find enough enjoyment in the improvement process for aim training to feel worthwhile.
- 2) Try changing the way you divvy up your routine over the course of a day. You might enjoy the process more if you practice for periods of 20 minutes or so multiple times over the course of the day until you finish however much you set for yourself to do in a day. You could bounce back and forth between the scenarios you set for yourself to do, like 5 minutes of one, 5 of another etc and repeat until you have done however much you set out to do for each scenario.
- 3) Try different scenarios, You may find that what you are currently training on is stale or you are so familiar with the process of those scenarios that it doesn't interest you. This is a large part of why alternating scenarios daily or however often you like can be a good idea, keeping your routine engaging is an effective way to maintain interest.
- 4) It is worth understanding that a big part of becoming really good at any skill is overcoming the weight of your own expectations. Any success will make you feel good, failing to see that success repeatedly fills you with doubt. This doubt can lead you to become demotivated due to the lack of consistent reinforcement. You CAN however become very good at anything you put your mind to, and that is the truth. Believing it and having faith in your ability to improve is the best motivator you could hope for.

Health and physical fatigue:

If you are sick or tired then feel free to take the day off aim training, you need to be able to concentrate and act with intention in order to be able to improve efficiently. If you are feeling out of it then just take the day off, its not worth the hassle of forcing yourself through your routine if you aren't up for it. There is plenty of anecdotal evidence of people who have come back after a break and benefited from it, similarly you won't suddenly become worse because you stopped practicing for a bit.
